

FOR IMMEDIATE RELEASE

Los Angeles, CA (September 26, 2007) – iCONNECT's compatibility with ALCoder enables clients to maximize their efficiency by leveraging the strengths of both products. Users can streamline their coding with ALCoder auto-coding software (from Rosen Technology Resources, Inc.) and then seamlessly load that data into iCONNECT (from iCONNECT Development, LLC) where it can be searched, organized, and reviewed.

"Our goal is to enable our clients to save time and money. This includes ensuring our products are compatible with other litigation tools so users have the most efficient workflow possible," said Ian Campbell, Chief Operating Officer of iCONNECT Development, LLC.

ALCoder simplifies the coding process by auto-coding the document text (e.g., from OCR or ESI) to identify and extract names, dates, and so on and plugging that information into coding fields. The coded data is seamlessly imported into iCONNECT where users can then focus on review tasks.

iCONNECT's review tools include extensive search capabilities, native file viewing, bulk review options, keyboard shortcuts, and metrics reports. iCONNECT's secure web-based access also supports the review process by enabling counsel and staff located in multiple locations to review the same documents.

"The integration between ALCoder and iCONNECT will be an extremely valuable tool for clients. The ease of use streamlines workflow and helps to complete the final piece of the litigation support puzzle," said Lisa Rosen, President of Rosen Technology Resources, Inc.

With a diverse suite of products, iCONNECT provides clients with a variety of options to fit their needs. iCONNECTnXT, the company's flagship product, is fully integrated with other leading products such as LiveNote, IPRO, CaseMap and Discovery Cracker to form a core part of a total litigation support solution. iCONNECT Pod is a fully configured ready-to-use iCONNECTnXT system that is hosted for you to save on IT costs, but you maintain full administrative control as though it was an in-house system. The Pod can be hosted in locations around the world including North America, Germany, Japan and the UK. iCONNECTeXT allows firms to leverage their existing Oracle infrastructure and gain all the benefits of iCONNECT technology.

About Rosen Technology Resources, Inc.:

Rosen Technology Resources, Inc. ("RTR") provides litigation support services, software sales, consulting and training from the beginning of a case through trial. Its flagship product, ALCoder, is used for both electronic discovery and scanned documents to auto-code or supplement metadata.
